Objective

- Relationships between clays, natural fractures and permeability
- Volcanic area of Bouillante (Guadeloupe))
- Granite basement of the EGS Soultz wells (France)

Hydrothermal alteration at Bouillante

Geothermal Field data

Well BO-6

Department of Geothermal Energy (GTH)

ENGINE Workshop, Volterra (Italy), April 2-4, 2007

Clays-fractures-permeability at Soultz

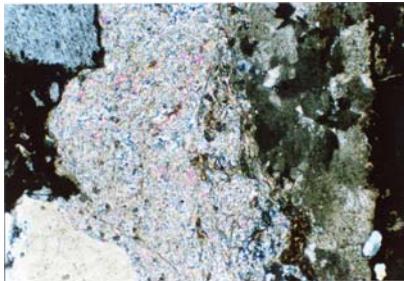

Damaged fracture zone

Clays: illite + tosudite

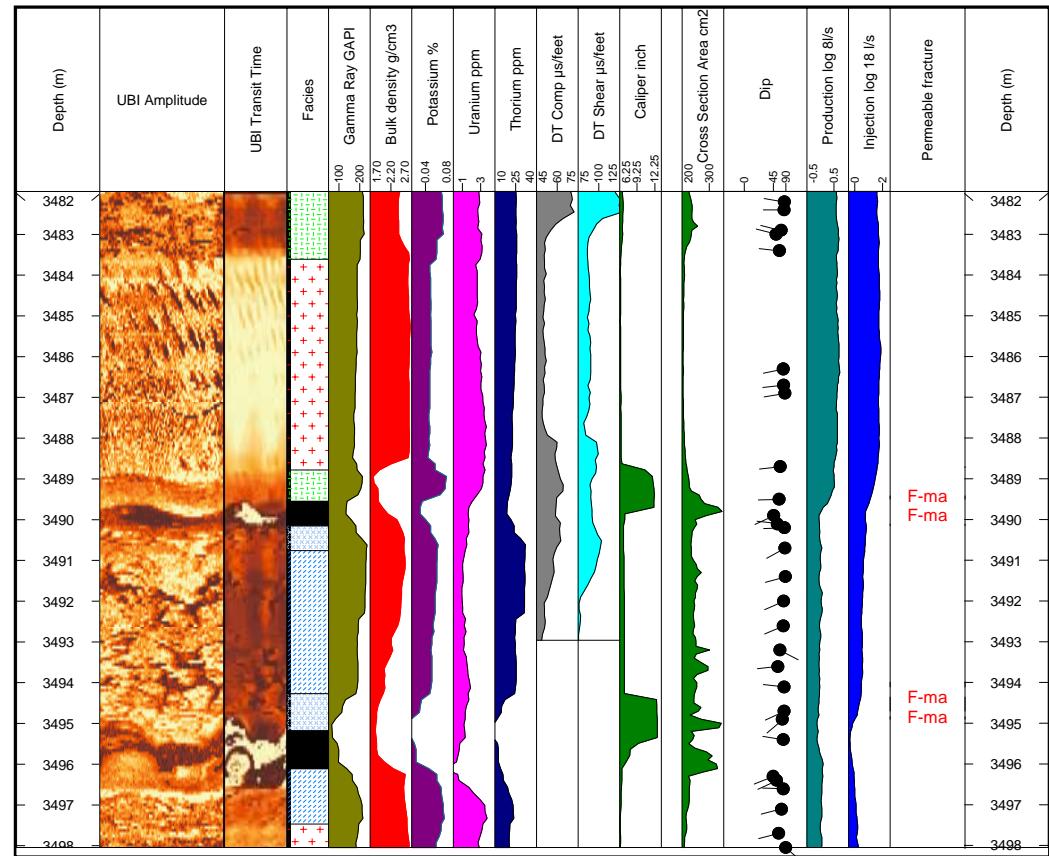

Secondary quartz deposition

High porosity

Brines 100g/L

Thin section - Fracture
Illite, calcite, hematite

Well GPK1, 3500 m
