

# The geothermal potential of continental Yemen: new geochemical and isotopic insights from thermal water and gas discharges.

Minissale A., Mattash M.A., AlGanad, N., AdDukhain, A.M., Hazzae M.K..  
Vaselli O., Tassi F., Selmo E., Shawki M.N., Tedesco D., Poreda R.

# Method and area of interest

- **Geochemical study on cold and thermal springs (gas and water phases)**
- **Chemical and isotopic characterization of fluids on a regional scale**

# Main Aims

- **Origin of fluids**
- **Relations with local and regional tectonics**
- **Most promising areas for geothermal exploitation**
- **Planning for future exploration projects**
